

REGENESIS[®]

REMEDICATION SERVICES

Expert Remediation Services for Environmental Consultants

Over 20 Years of Experience on Thousands of Remediation Projects

REGENESIS Remediation Services (RRS) represents a dedicated team of scientists and engineers whose primary function is to provide environmental engineering and consulting firms with specialized groundwater and soil remediation planning, design verification and application services. This uniquely qualified group of remediation professionals combines excellence in field activity management with REGENESIS' state-of-the-art technologies to bring sites to regulatory closure. RRS draws from over 20 years of experience working with leading environmental engineering firms on thousands of remediation projects around the world.

HOW RRS OPERATES

- We work directly with environmental engineering/consulting firms to engineer remediation solutions employing REGENESIS' globally recognized advanced technologies
- We mobilize our own state-of-the-art dosing and monitoring equipment to ensure successful results
- We partner with experienced regional drill and direct push contractors to ensure timely mobilization and to control costs
- We take sole responsibility for meeting project objectives, as turn-key provider of design, advanced chemical technologies, and application services

Turn-Key and Remediation Services Developed in Response to Growing Customer Needs

REGENESIS has always been closely involved with environmental engineering consultants in the design and dosing of its remedial reagents. In recent years however, as the range and complexity of remediation technologies has increased, a growing number of environmental engineering consultants have engaged RRS to actively manage the field application of our technologies. RRS ensures a greater probability of success, while minimizing the risks associated with managing soil and groundwater remediation projects.

World Class Clients Include:

Proven Processes for Safe and Effective Remediation

Our team of highly trained engineers, scientists and field support personnel tap into valuable resources, including REGENESIS' state-of-the-art laboratory to evaluate field samples and optimize remedial solutions.

In addition, the use of high resolution site characterization (HRSC) tools confirm the lateral and vertical extent of contaminants and ensure optimal distribution of remediation reagents. Hands-on field application management and supervision carefully oversee dosing and monitoring equipment to ensure proper product application every time. RRS provides clients with a wide range of services that includes all aspects of remediation application solutions. As part of our commitment to proven process control, RRS provides detailed documentation and record keeping. Supporting documentation includes a site safety plan, detailed application summary report, and a post application remediation performance review. All of these critical components add up to increased certainty and peace of mind when it comes to achieving project success.

Guaranteeing Results with Certainty

- **Reduced risk** and project cost built on a foundation of experience and performance
- **A turn-key solution** - RRS takes on the responsibility for all aspects of the remediation project
- **Best-in-class application services** ensures proper placement, distribution and performance of remedial reagents
- **Assurance of proper reagent dosing** based on pilot testing and/or high resolution verification tools
- **Manufacturer's direct knowledge** of and experience with REGENESIS' advanced technology reagents
- **Strong understanding** of subsurface geology, geochemistry, and reagent applicability
- **Ability to evaluate and modify remediation** injection plans, relative to unknown or challenging site conditions
- **Expertise** in equipment selection and usage at a range of sites and conditions
- **A comprehensive application summary report**, which documents all aspects of on-site remediation activities
- **A commitment to safety** based on best industry practices

MINIMIZE RISK WITH PERFORMANCE GUARANTEED

RRS is staffed with a uniquely qualified team of engineers and scientists, who provide one point of contact dedicated to delivering specialized remediation planning, design, and application services to environmental consultants and engineers. Safety is paramount to our operations and an integral part of our services. By delivering exceptional service, backed by years of expert field knowledge, our team can guarantee certainty on the jobsite.
