

Range of Treatable Contaminants Guide

Range of Treatable Contaminants

REGENESIS products have been used to effectively treat a broad range of groundwater contaminants from petroleum hydrocarbons, to chlorinated solvents, pesticides, and metals. Contact us to discuss the treatability of your contaminant of concern and site details so that we can recommend the most effective REGENESIS solution.

Results will depend on specific site conditions, please discuss your site with a REGENESIS Technical Manager to determine which technology is most optimal for your site. The information provided is for guidance only. It is recommended that a pilot test or treatability study be performed to verify applicability to your specific contaminant and site conditions. REGENESIS makes no warranty or representation, expressed or inferred, and nothing herein should be construed as to guaranteeing actual results in field use, or permission or recommendation to infringe any patent.

Treatment Applicability of *In Situ* Technologies Based on Geology and Concentration

Contact us on europe@regenesisis.com to discuss the treatability of your contaminant of concern and site details so that we can recommend the most effective REGENESIS solution.

		Geology			Concentration
